

Description

Whilst the majority of valves are supplied with hand or gearbox operators, many valves are used on automated processes requiring actuation and instrumentation packages to be fitted.

The valves can be supplied "Bare-shaft" for acutation by the customer or fully actuated to customer specifications by ourselves to ensure a correct marriage of the different items and subsequent performance before installation.

Materials

Supplied to customer specification requirements.

Features

Standard valves can be easily adapted / modified.

Options

Materials.
Positioners.
Actuator types, Air / Electric / Hydraulic.
Actuator manufacture to suit project or site preference.
Actuator procurement or use of "Free issue" items.

Specifications

Customization and compliance to customer / project requirements.
